Porcelain Surface Technology for a Sustainable Future

A CPD by Eco Friendly Tiles

In this 1 hour seminar for both architects and interior designers, Brandon Neuhaus from Eco Friendly Tiles will explore the growing demand for environmentally responsible porcelain surface materials, and the technology Eco Friendly Tiles use to meet this rapid growth.

How can specifying porcelain get my project LEED, BREEAM or Ska accreditation?

How is the tiling industry taking steps towards ensuring a sustainable future?

How can one porcelain surface material clad every surface in a building?

How have we made a 1m x 3m tile only 3.5mm thick?

We'll supply the answers to all these questions, and to demonstrate how respecting the eco-system has led to producing a product that can be applied in once unthinkable ways, Brandon will introduce our Shannon Range:

- From only 3.5mm thick, yet so strong it can be laid in large format slabs up to 3.2 x 1.5m.
- Low embodied carbon, LEED, Ska and BREEAM compliance, 100% natural and recyclable with 0% VOC emissions.
- Available in a huge array of colours and finishes, from natural stone and wood looks to metallics and oxides.

We'll also cover the rest of our extensive range of interior and exterior porcelain tiling solutions to show you how specifying with strong eco-friendly qualities doesn't mean a compromise on style, design or price.

So whether you and your team are designing a multi-storey tower, a shopping mall, a hotel, a retail store, a residential home or even a swimming pool...

Eco Friendly Tiles has got you covered...inside and out.
