# *Eco Friendly Facades*

XL - The World's Largest Porcelain Facade Panel

**Why should I choose a porcelain facade for my next project?**

**Why is a porcelain facade better than what I've already used before?**

**How can a single porcelain slab be 3.2m high?**

**Can a 150m<sup>2</sup> facade purify the same amount of air as a forested area the size of four tennis courts?**

This CPD will give you those answers.

One single piece of porcelain. 1620mm wide, 3240mm high and only 12mm thick - The XL slab from our Shannon range is the worlds largest, and strongest porcelain facade panel.

Produced using a cutting edge pressing system which reduces traces of tension from the slab, the XL slab can be fixed using multiple methods:

- Undercut/Hidden Anchor
- Mechanically Fixed Rainscreen
- Hook On Rainscreen
- Structurally Bonded Rainscreen
- Standard Adhesive Fixing
- As a Curtain Wall/Spandrel Panels

Physical and chemical properties include:

- 25 Year UV Warranty (even on Black)
- Heat Resistant
- Stain and Detergent Resistant
- Scratch and abrasion resistant
- Good bending strength
- Frost resistant
- Resistant to fungal growth
- Chemical Resistant
- CWCT tested

These slabs are also available with self cleaning properties! Yes, self cleaning. We'll introduce you to Hydrotect™ - the surface technology that creates a self cleaning barrier that lifts up and allows dirt to wash away and changes pollutants into activated oxygen.

All of these questions will be answered by Brandon Neuhaus, Director of Eco Friendly Tiles - the sustainable porcelain specialists who can cover your next building both inside and out.

If you want more information in the meantime...
